

Technical Data

Product Code: WA411

Product Name: SuperMA Kit

Product Information: SuperMA Kit can be used to treat all types of vegetables, cereals oil seeds and cash crops seeds.

Kit Contents:

WA325 – SuperAce™

WA401 – SuperMykorrhiza™ Plus

Recommended Dosage:

For the treatment of seeds required per acre of plot, mix the entire kit content in 5-25 liters of water.

Direction for Use:

Seed application: Add all the contents of SuperMA Kit (WA411) in required volume of water to coat desired seeds. To increase the sticking ability, add boiled and cooled 50gm jaggery or 5gm guar gum in required amount of water and mix with above microbial solution. Mix well till the solution gets homogenized. Treat the seeds by gently rubbing them in the above solution for even coating (Use rubber gloves). Dry the treated seeds in shade for 15-20 minutes. Seeds treated in this manner can now be used for sowing purpose.

Seedling treatment: Dip the desired seedling roots in the above solution for 5-10 minutes. Treated seedling in this manner can now be used for transplanting in the field.

Storage & Shelf life:

Store the product in a cool place away from direct heat and sunlight. Do not store the product along with food or animal feed. Empty containers should not be used for storage of any food products. Keep the product out of children's reach. Use before the expiry date mentioned on the label.

Note:

For Agricultural use only.

Warranty:

The use of this product is beyond our control, we only assure the uniform quality of the product. The company is not responsible for crop damage occurring due to usage other than recommended dosage, sudden changes in environmental conditions or any natural calamity.
